CV

FÉLIX MACHÍN

Félix Machín studied Biology in the University of La Laguna (ULL) from 1990 to 1995, being awarded a prize to the most outstanding graduate of that year. In 2001, he completed a PhD in Molecular and Cell Biology under the supervision of Dr. José M Siverio in the same University. From 2001 to 2005 he was a postdoctoral fellow at Imperial Collage in London, working in the Cell Cycle group headed by Dr. Luis Aragón. In 2005 he obtained a Ramón y Cajal research contract and returned to Tenerife to head his own group at Hospital Universitario Ntra Sra de Candelaria (HUNSC). In 2010 he was accredited by the I3 program and got a permanent contract by the Servicio Canario de la Salud. Dr Machín has been continuously funded by competitive national research grants since 2006.

Dr. Machín has worked with yeasts throughout his entire career and on chromosome segregation in budding yeast since 2001. Besides working on chromosome segregation, he has often collaborated with chemists in biological evaluation of compounds. He has published 33 peer-reviewed research articles, in seven of them being first author and senior author in another eleven.
