

CV- Pere-Joan Cardona

Is specialist in Clinical Microbiology. He is the Head of the Experimental Tuberculosis Unit at the Institut Germans Trias i Pujol (IGTP) of Badalona (Catalonia, Spain) and the Chief Scientific Officer of Archivel Farma, s.l. sited at Badalona. He is Assistant Professor of Microbiology at the Universitat Autònoma de Barcelona. For the last 15 years he has been involved in the study of the pathophysiology of TB infection through the development of different experimental models in mice, guinea pig, goat and mini-pig. From this knowledge, he designed the vaccine RUTI® against latent bacilli that will reduce the length of latent infection and active TB treatment, that is developed by Archivel Farma, s.l. and is about to start the Phase III clinical trial. He is author of more than 60 peer-reviewed publications.
