

# Summer Course in Nanoscience and Nanotechnology

## III “Julio Palacios” International Symposium

A Coruña, 21- 22 July 2022

### ABSTRACT

## Nanoscience and nanotechnology is an interdisciplinary world

Marina Delgado-Téllez

---

Since R. Feynmann in 1959 opened the door to nanoscience and nanotechnology in his talk “There’s Plenty of Room at the Bottom”, many approaches to this nano-world have been taken. We will travel from 1959 to nowadays to see how the nano world has needed all these disciplines to develop. From Physics to Chemistry, Medicine, Biology, and Pharmacy. From Engineering, Informatics to Mathematics. We will see that also an ethical approach must be considered as happens with many sciences and technologies. This talk aims to point out the strong interdisciplinary view of nanoscience and nanotechnology and to highlight the need of all these disciplines working all together.
